What is the best metal utensil- safe nonstick cookware?

I'm looking for a new cookware set for christmas. I've read that T-fal Expert Cook is safe for use with metal utensils. Are there any other good cookware sets that have this feature? I'm not exactly impressed by all of the features of this set, but I don't want to have to baby my pots and pans forever. Help!

Thanks!

P.S. I hate stainless steel cookware. If I wanted advice on which stainless set to purchase, I would've asked that question. I've done my research on the supposed ill-effects of nonstick coatings and aluminum, and it's b.s. so, please, save me the fear mongering.
